## CHRISTMAS JOY.

preparation for Christmas crops. The disappointment. EVENING WORLD's Christmas trees were an unqualified success. Over thirty thousand children were filled to the brim with happiness. Pretty gifts, useful articles, and toothsome sweets were dispensed with an open-handed generosity which made those poor little hearts feel that miry tales were weak fiction compared to the comforting | It is strange that abort and equatty and chubby

All who contributed to that simple joyful- the most beautiful presents. ness had reward enough. They made the ... What shall I give you, pop, for Christmas?" can bear sweeter consolation than that The good women who officiated at the distribution did so with all the grace and sweetness and adorable tact which makes their sex the admiration and the delight of more rudely constituted man.

The good deed has been done, and they who did it can rejoice in its perfect accomplishment. They who had no share in it lost a great pleasure.

## THE DAY AFTER.

The charming weather this morning has Beattle. on its breath the perfume of the blizzard. The Weather Bureau wags its authoritive head in a dejected way and tells us it is going to be a sweet old storm. It comes to give a stimulus to the singgish spirit which reaction from yesterday's merriment is calculated to beget.

It is worse than useless to blackguard the weather. It may be as nasty as possible, but a volley of vituperative epithets or stronger verbal shot from profanity's store of ammunition has no more effect than shooting boiled peas at the sides of an tron-clad. It is the only wisdom to take tive in the weather philosophically.

Last night the climate began whetting its teeth against a solid block of cold, and this morning it is gnashing them in great shape. If this is the blossoming of another blizzard it should outdo the one which has the record now. New York will nositively refuse to recognize any worn-out sputtering little meteorological vortex which tries to masquerade as a Dakota scalp scraper.

# ONE FOR THE GOAT DISTRICT.

In the apportionment of their fields of jurisdiction by those eclective dignituries, the police magistrates, it is humbly suggested that the worst of the collection should be billeted on the goat district. her preketbook, may the Chicago Of course, the labor of making such a Post. selection will be a very enerous one. Disinstalled therein as its due tutelary genuis.

The arguments against the introduction of women into the station-houses to subserve the interests of humanity, modesty and decency by caring for the prisoners of their own sex who may be arrested, still fall to convince true humanitarians that such an innovation will not be most salutary in its results.

The expense of such a change need not be considered in a municipality as well able to pay for civic necessities as New York City. The statement that the bulk of the women prisoners are low, immodest and irredecemable is not of great force. They are still women, and their sex should be honored and protected. Put in the Police Matrons. be honored and protected. Put in the ceiving. Police Matrons.

# MOURNFUL FIRES.

he comes to ched his baleful glow upon a scene of festivity. Christmas Day ought to their indebtedness. The structure cost Courier.

Another sad event of the day was the think a halo would be dreadfully in burning of a Philadelphia residence and way, especially in a crowd." Christmas tree. The only lesson is the old her companion answered, "as do the one of prudence and watchfulness."

Brooklyn man is one that should be thoroughly investigated. The statement is made that the officer clubbed the young man, and after his head was bandaged and he was put into a room at the station-house, the officer made his way to the place and clubbed him again. Clubbing bratality is a crying sin on the part of a policeman, and should be punished with the greatest severity. Anthority and a club are bad things to put in the hands of a brute.

When anybody snubs "Tummy" he awakens the blooming suspictors the place in the blooming suspictors the place in the place and things to put in the hands of a brute.

# A Man Plunged Into a Temperature Fifty Degrees Below Zero.

Water Thrown Over Him Was In-

stantly Frozen.

One of the strangest of mishaps ever reported was that as the result of which Louis L. Youngman lies suffering at his home, 434 Everett avenue, Kansas City, Kan. Men tion of it was made at the time in the Kansas City Globe, but nowhere has its character and peculiar feature been fully explained until now. Youngman is an en-Young and old, poor and rich are to-day dis- gineer employed by the Armour Packing cussing the events of yesterday, and hand- Company, and while at his work in the resome and trivial presents are being proudly friggrating department Wednesday he was enveloped, without the slightest warning, everyto ty should be, for white the rich were able to buy their own presents the poor were supplied from The Evening World's Christians (1997). The Evening World's Christians (1997) and the merest scratch escaped being frozen to death.

how the poor children flocked to the Christmas Its own ice and possesses plants which suptrees yesterday and feasted on the bounty of ply the necessary frigidity for all of the huge cooling rooms in the establishment. The appeals on behalf of the poor children | The cold-producing capacity of the concern in a single day is equal to the effect produced by the melting of 800 tons of ice in of dollars in providing tops and clothing for the same period. The process by which these effects are produced depends on a many of whom were unable to go on the street simple principle—that the evaporation of a liquid or the expansion of a gas absorbs And now to all who contributed to the fund! heat, or, in common parlance, produces The method of applying this principle,

plicated, penderous and costly machinery. \$5 A MONTH TILL NEW YEAR'S. From the Eastern factories the Armours receive ammonia either in the pure gaseous offform, compressed in heavy iron cylinders, or in the form of the aqua ammonia of commerce. When this latter is used it is freed of the water in which it is absorbed as only the anhydrous gas can be used. The ammonia gas, then chemically pure,

is forced by powerful upright pumps into iron pipes under a high pressure, varying from 110 to 200 pounds, the average being about 150. Naturally this compression of one of the most expansive of gases into a liquid form causes the appearance of heat, and the now liquid ammonia issues from and the now liquid ammonia issues from the pumps at a temperature of 150 degrees Fahrenheit. To reduce this the pipes pass and repass through vats of cool water, and without losing the high pressure the heat disappears, the temperature within the straining pipes falling to 50 degrees. The gas is then ready to do its work and passing into dark rooms, up under the roof of the big packing houses, is liberated sud-denly into mazes of small piping, resem-bling those used in an ordinary steam coil. Thus liberated into a space many times

larger than the delivery pipe, the high pres

sure disappears and the gas, of course, ex-pands instantaneously, the heat necessary to cause the expansion coming from the surrounding atmosphere, the temperature of which goes down far below zero with astonishing quickness.

In practice the expansion tubes are im-

In practice the expansion tubes are immersed in great vats of exceedingly strong brine, and this, becoming intensely cold, is pumped through tubing, on which there is always a coating of white frost, to the various cooling rooms, supplying them with cold in a manner analagous to the supplying of heat by the hot water system. The water being hourly charged with salt cannot freeze, though everything that comes in contact with it does.

It was in one of these gloomy vat rooms that Youngman had his narrow escape from a remarkable death. Entering the room through a small doorway, the man turned on the row of incandescent lamps that give the only light that ever reaches the apartment. There was a pungent odor

Youngman located the leak in one of the delivery tubes, and surrounded by a network of conductors, some covered with white hoar frost and others heaped with fantastic shapes of ice clustered about every joint and valve opening, he set to work. The man's back was against the west and the leak violnt on which he was wall and the leaky joint on which

plying his wrench was within two feet of his face.

For several moments he tugged at the obstinate joint when, with the suddenness of a thunder clap, the joint gave way and a ject of the liquified ammonia, under the impulse of the ponderous pump in the engine room below, struck him full in the face. Instantly the gas evaporated and the young man was plunged in an atmosphere of in tense cold, not less than 50 degrees below zero. With rure presence of mind the man threw his hands over his face to protect his

through the narrow opening, down the ladder steps and into the engine-room.

The ammonia, with which his clothing was saturated, was still vaporizing in white clouds and his body had the appearance of being on fire. The others in the engine-room dashed water upon him, and instantly it congealed, sheathing Youngman with ice, which soon melted again.

The man's injuries, strange to say, were not serious. His face and hands were puffed and discolored by the blast as if by

puffed and discolored by the blast as if by a burn, and he was greatly prostrated by the sudden chill. Deepte his presence of mind, he had inhaled a trilling quantity of the gas, and a slight attack of bronchitis resulted. Had he remained under the jet an instant longer death would have been certain.

The engineer in charge of the plant comprehending what had happened the prehending what had bappened the moin at he saw Youngman, dashed into the room and quickly closed the valve, shutting off the supply of ammonia, himsel ceiving slight injuries about the hands,

No. She Didn't. When an officer had rescued a woman and her borse and cutter from an impending smash-up on Grand River, says the De-troit Free Press, he asked of her: "Don't you know that you are on the wrong side of the street?" "Why, no."

"Don't you know the ordinance says you must have bells on the horse or thills?" "W.y. no."
"Don't you know that your horse is harnessed up so that his heels knock the cut

"Don't you know that two of the braces of the cutter are broken and drag

# Nothing Succeeds

The success of THE-WORLD has succeeded in securing for the offices in\_ -its new home 90 per cent.of the tenants it can accommodate before the final \_completion of the building-for the mechanics have notvet finished their tasks.

THE WORLD offers its\_ \_tenants, as it does its readers,\_ more for the money than any other newspaper on earth.

The Superintendent can\_ be seen at the building-(room 8, first floor) and he will show offices, give \_prices, &c., &c.
